

# Flight Readiness Review

Texas Tech University - Space Raiders

# Our Team

---

- Faculty Advisor: Andrew Mosedale
- Adult Educator: Barre Wheatly
- Team Mentor: Bill Balash
- Team Leader: Davis Hall
- Safety Lead: Derrick Slatton
- Vehicle Lead: Edward Hieb
- Recovery Lead: Matthew Rowe
- Payload Lead: Jacob Hinojos

# Launch Day Rocket and Payload Dimensions

## **Rocket Dimensions**

- Height: 10.37 ft
- Inner Diameter: 5.98 in
- Outer Diameter: 6.37-6.5 in
- Mass on Pad: 44.01 lbs
- Dead Mass: 36.93 lbs
- Mass Margin: 44 - 48 lbs

## **Rover Dimensions**

- Length: 4.25 in
- Width: 2.9 in
- Height: 2.13 in
- Payload Section Length: 7.55 in
- Bearing Inner Diameter: 4.92 in
- Bearing Outer Diameter: 5.79 in

1. See BOM for parts list and details of individual parts
2. Airframe interface for modular payload
3. Compatible with 75mm solid propellant class (L) motor
4. Equipped with a dual deployment recovery system

Raider 2 USLI Launch Vehicle

 Space Raiders

SPACE RAIDERS

# Vehicle Design

# Launch Vehicle Weight Summary (Huntsville)

- Nose Cone Assembly Mass .....3.55 lbs
- Payload Section Mass .....6.22 lbs
- E-Bay Section Mass .....12.61 lbs
- Motor Grain and Casing Mass .....9.52 lbs
- Aft Section Mass .....14.55 lbs
- Ballast Weight (Huntsville).....2.67 lbs
- Total Pad Weight (as launched).....46.68 lbs

# Launch Vehicle Air Frame

---

- 6in Blue Tube Body Tube
  - Rigid, single piece design for aft (DACS & motor) section
  - Cheaper and easier to modify
  - Light weight
- 6in Carbon & Kevlar Reinforced Phenolic Body Tube
  - Reinforced strength for separating sections
  - Better blast containment for separation charges
- 6in Blue Tube Coupler
  - Thinner wall thickness to maximize fuselage space
  - Light weight

# Composite Phenolic Carbon Kevlar Tube

- Layer A: Phenolic
- Layer B: Carbon Fiber
- Layer C: Kevlar

# Bulkheads

---

- Multi-layer Plywood
  - Inexpensive and Lightweight
  - Easy to machine and mount
- Fiberglass Reinforced Plywood
  - Strong and lightweight
  - Easily machined
- G10 Fiberglass
  - Superior strength-weight ratio
  - Low space occupation due to 3/16<sup>th</sup> inch thickness
- Aluminum
  - High strength and weight
  - Complex and rigid mounting surface

# Nose Cone

3D Printed Polycarbonate – Long Elliptical Shape

- High density print (60%)
- Part sled for mounting electronics
- Low drag due to geometry
- Affordable and customizable

# Final Fin Design

## G10 Fiber Glass

- Heat resistant
- High tensile strength
- High strength-weight
- Reduces fin flutter
- Available in 3/16 inch
- Easily sanded using wet sanding technique

# Internal Interfaces

- Couplers
  - Shear Pins & Screws
- Rover Housing
  - Bear/Coupler Interface
  - Rover/Guide Rail Interface
- Motor Mount
  - Thrust Plate
  - Centering Rings
- Nose Cone

# Rail Button Selection

## 1515 Delrin Rail Buttons

- Commercially available
- Allows spacing for nose cone
- Delrin plastic is affordable

# External Interfaces

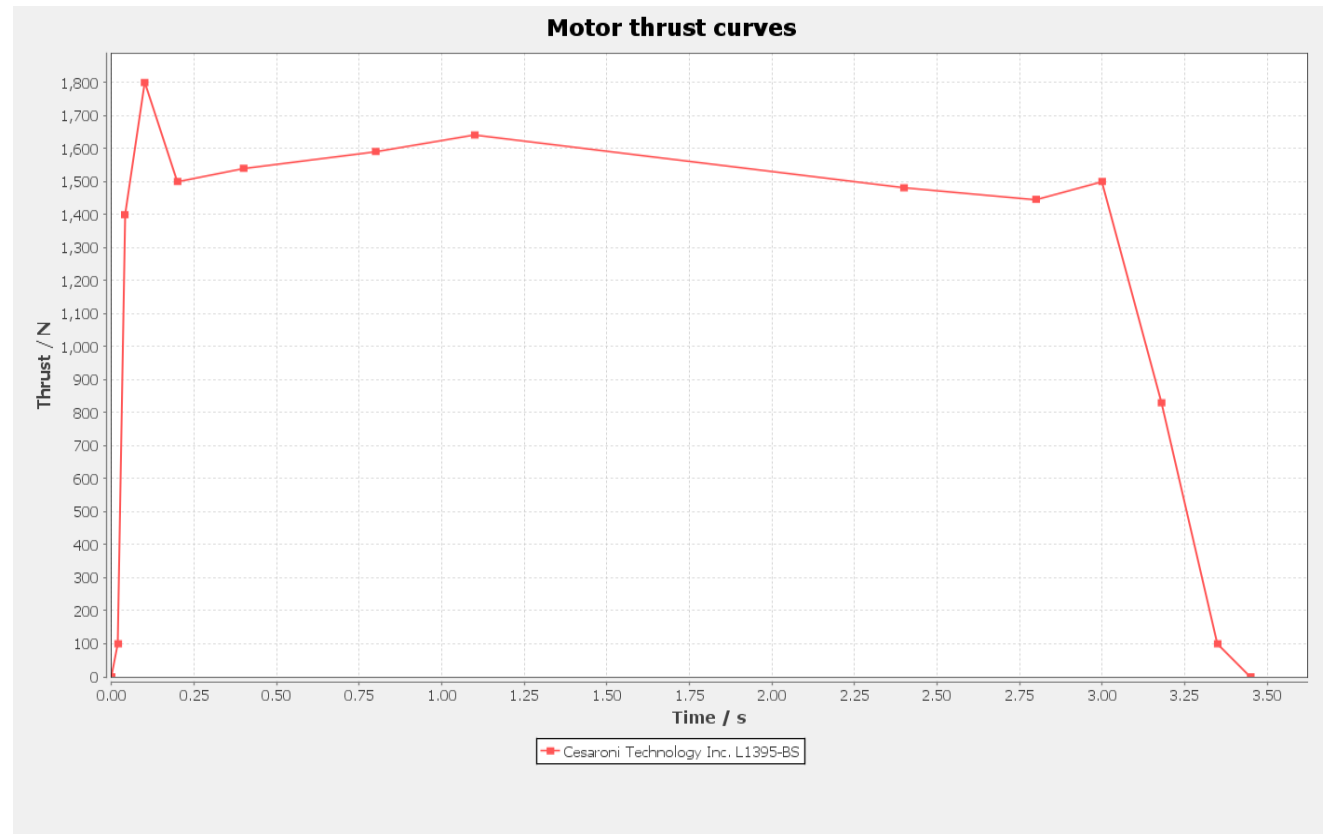

- Launch Pad
  - 12 feet tall (Huntsville)
  - 10 feet tall (LS Test Flight)
- Guide Rails
  - 1515 Rails
  - 1515 Rail Buttons

# Final Motor Selection

## Cesaroni L1395 – BS (Blue Streak)

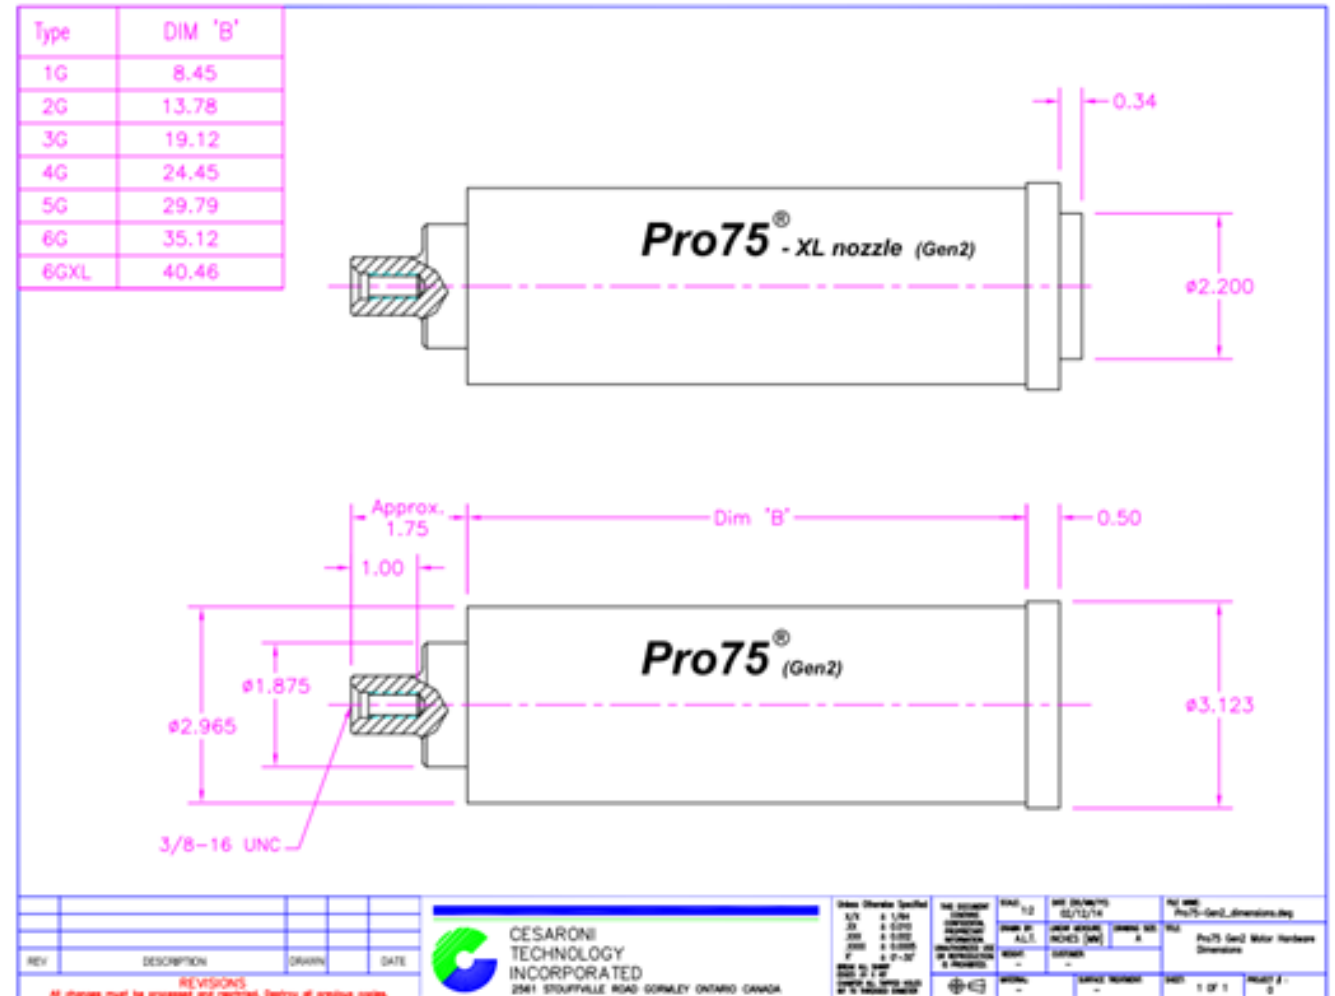

- 75mm, 4 Grain
- Average Thrust: 328.9 lbf
- Max Thrust: 404.7 lbf
- Total Impulse: 1100.4 lbf-s
- Burn Time: 3.45s
- Launch Mass: 9.5 lbm
- Dead Mass: 4.1 lbm

# Motor Hardware

## Cesaroni 75mm Casing

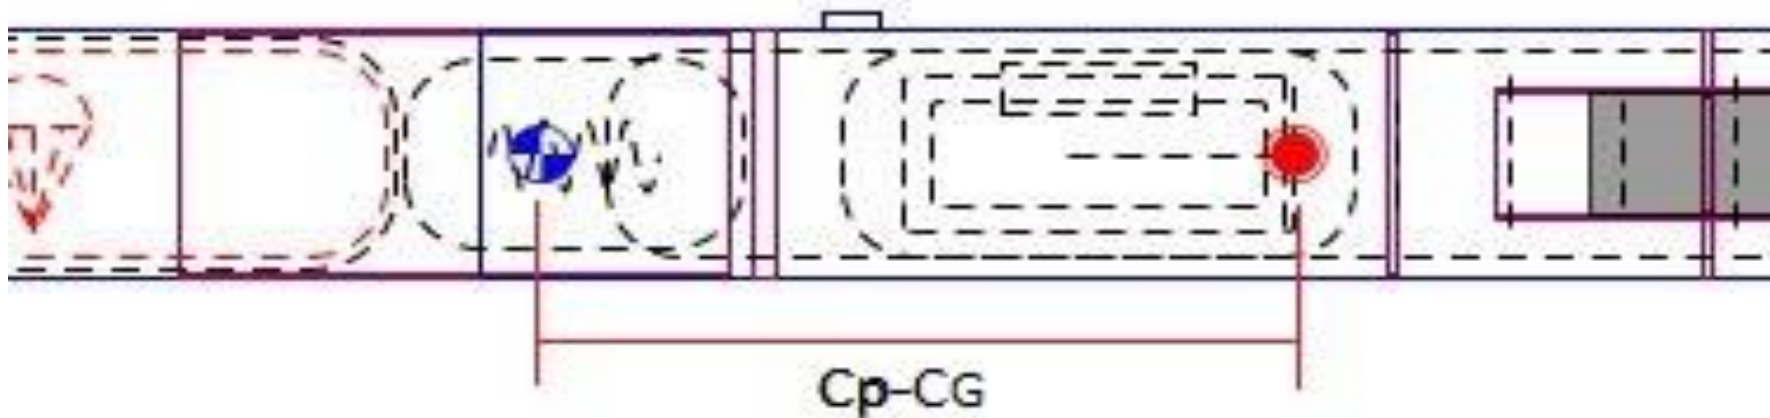

- Cesaroni manufactures casings for their motors therefore they are directly compatible with any of their motors
- CNC machined 6061 – T6 anodized aluminum

# Stability Factor

$$\text{Stability Factor} = \frac{C_P - C_G}{d}$$

$$\text{Stability Factor} = \frac{238 \text{ cm} - 197 \text{ cm}}{15.24 \text{ cm}} = 2.69$$

# Thrust to Weight Ratio

$$\text{Thrust to weight ratio} = \frac{\text{Average Thrust}}{\text{Weight}}$$

$$\text{Thrust to Weight Ratio} = \frac{1395 \text{ N}}{19.96 \text{ kg} * 9.81 \frac{\text{m}}{\text{s}^2}} = 7.12$$

Rocket  
Length 316 cm, max. diameter 17.1 cm  
Mass with motors 19964 g

Stability: 2.39 cal  
CG: 197 cm  
CP: 238 cm  
at  $W=0.30$

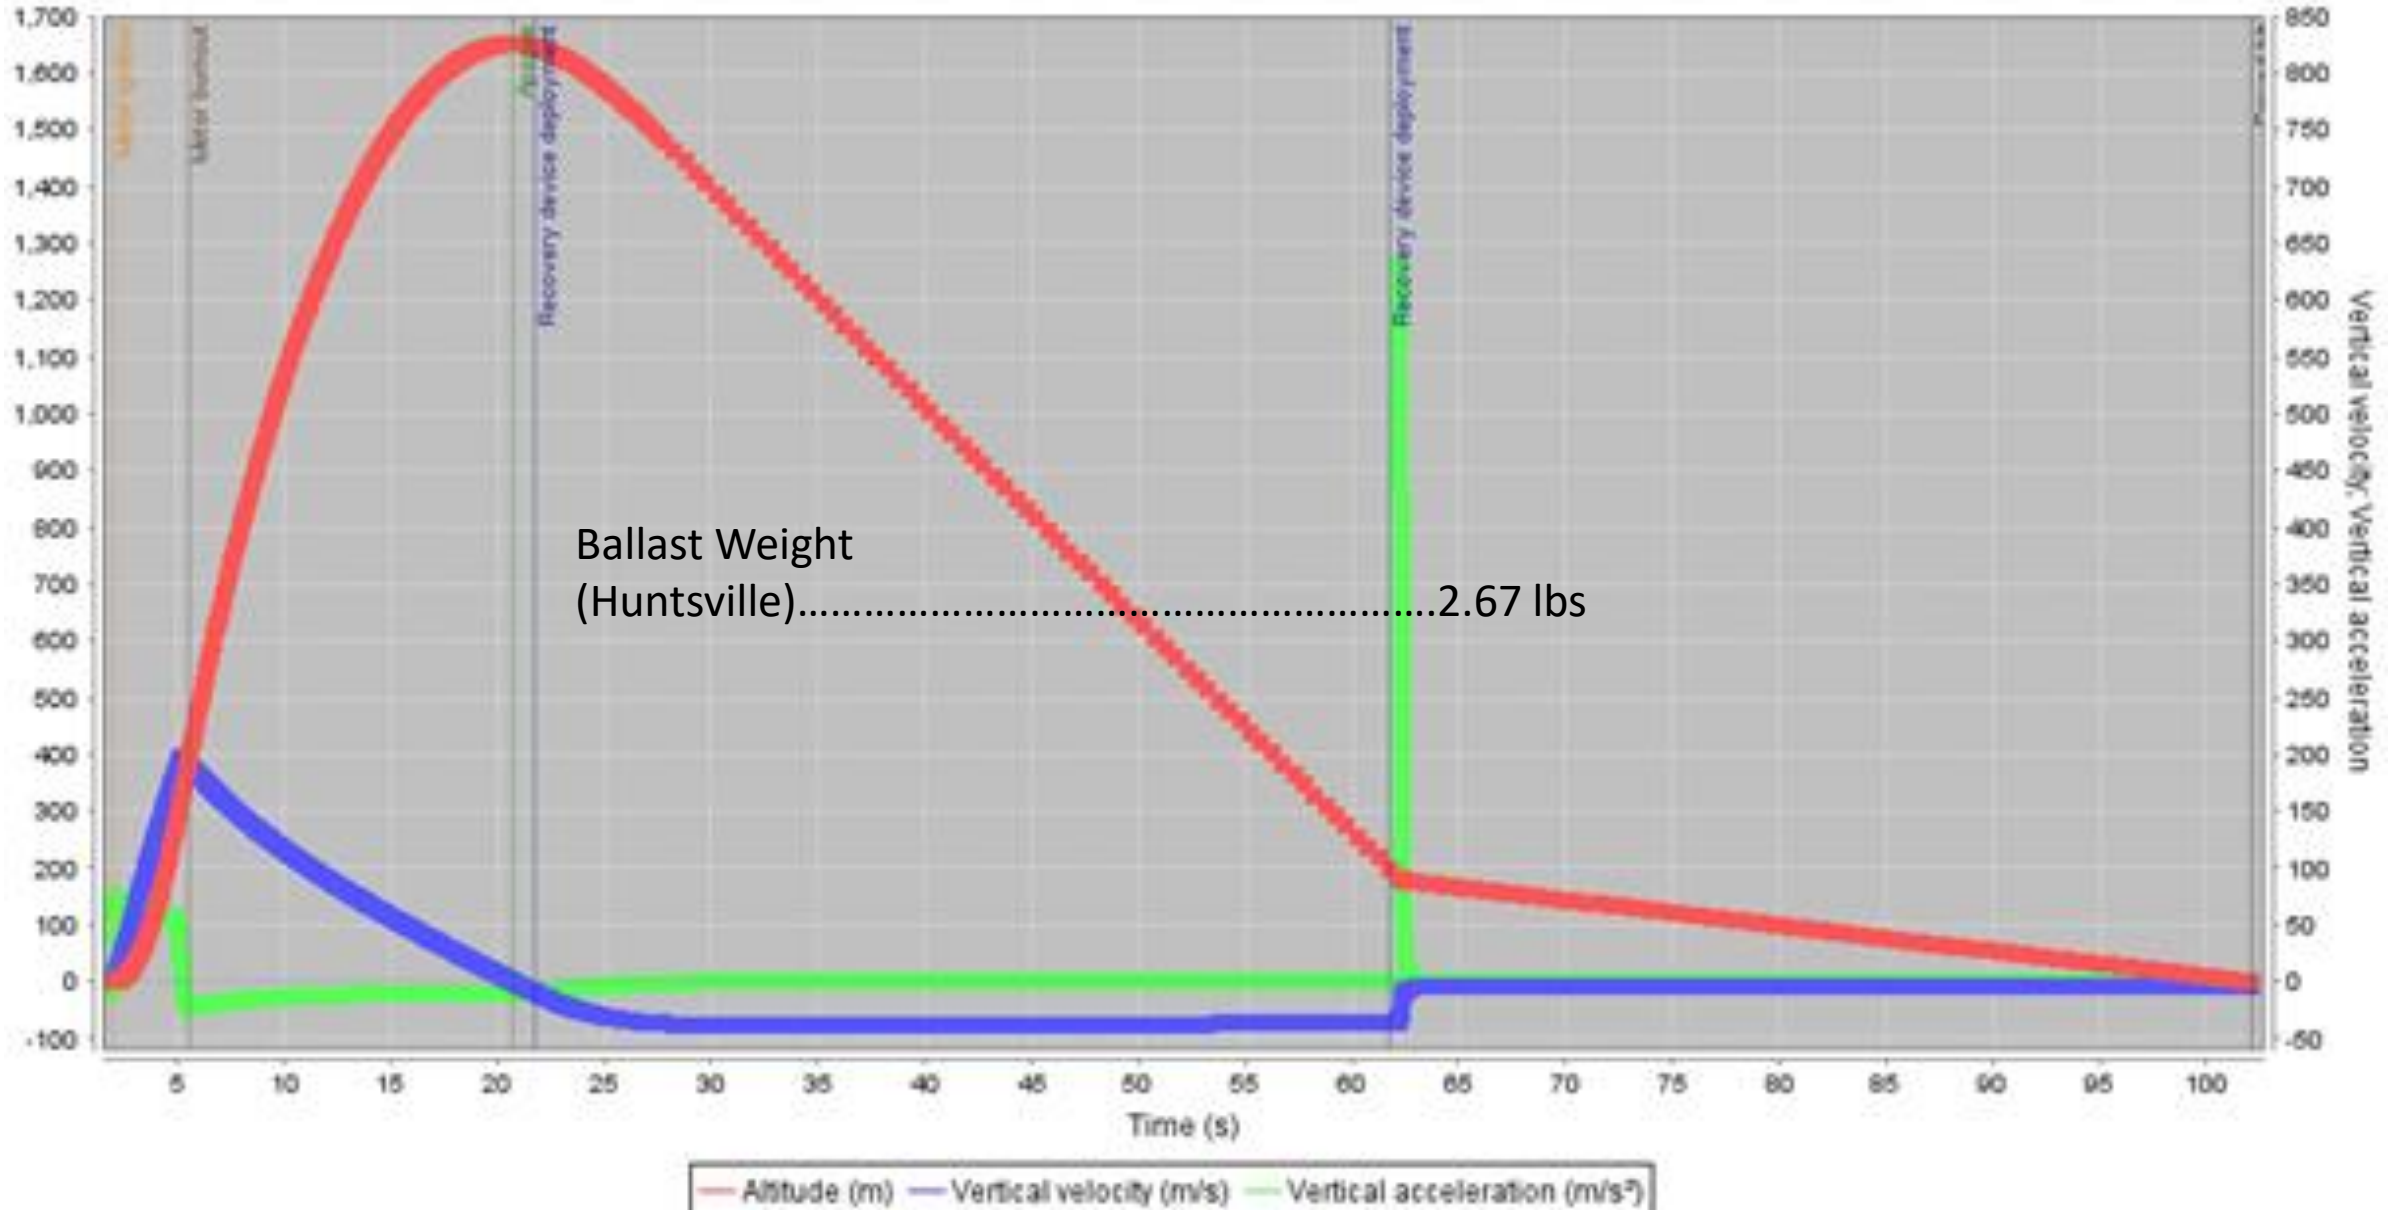

Apogee: 1750 m  
Max. velocity: 209 m/s (Mach 0.62)  
Max. acceleration: 79.1 m/s<sup>2</sup>

# Altitude Predictions

| Wind Speed (mph) | Altitude (m) | Altitude (ft) |
|------------------|--------------|---------------|
| 5                | 1654         | 5426          |
| 10               | 1644         | 5393          |
| 15               | 1632         | 5354          |
| 20               | 1626         | 5334          |

# Huntsville

Vertical motion vs. time

# Large Scale Flight

- We launched in Boys Ranch, TX (3/3/18)
- Weather conditions:
  - Wind Speed: 4mph
  - Sunny – Clear Skies
  - 40 Degrees F

# Boys Ranch

## Vertical motion vs. time

# Flight Results Data

- Apogee: 6064

# Flight Failures and Solutions

- Payload bay shear pin failure
  - Resulted in destruction of ABS nosecone
  - Would have resulted in destruction of rover if it was present
- Solutions
  - Calculated new required shear pin size to withstand G forces of main deployment
  - Reprinting of nosecone with polycarbonate material instead of ABS

# Large-Scale Test Flight Weight Summary (Boys Ranch)

- Nose Cone Assembly Mass .....3.55 lbs
- Payload Section Mass .....6.22 lbs
- E-Bay Section Mass .....12.61 lbs
- Motor Grain and Casing Mass .....9.52 lbs
- Aft Section Mass .....14.55 lbs
- Total Pad Mass (as launched).....44.01 lbs

# Recovery

- Parachute sizes
- Recovery Harness Type
- Size
- Length
- Descent Rates

# Parachute Sizes and Separation Charges

- Parachute Sizes
  - 4 foot pilot parachute
  - 2 foot drogue parachute
  - 16 foot main parachute
- Main Parachute charge sizes:
  - Main: 1.5g
  - Backup: 2.0g
- Drogue parachute charge sizes:
  - Main: 1.0g
  - Backup: 1.5g
- Nose cone separation charge sizes:
  - Main: 1.8g
  - Backup: 2.3g

# Recovery Testing

- Separation Charge Testing
  - Drogue, Main, Nose Cone
- Shock Cord Bundling

# Landing Kinetic Energy

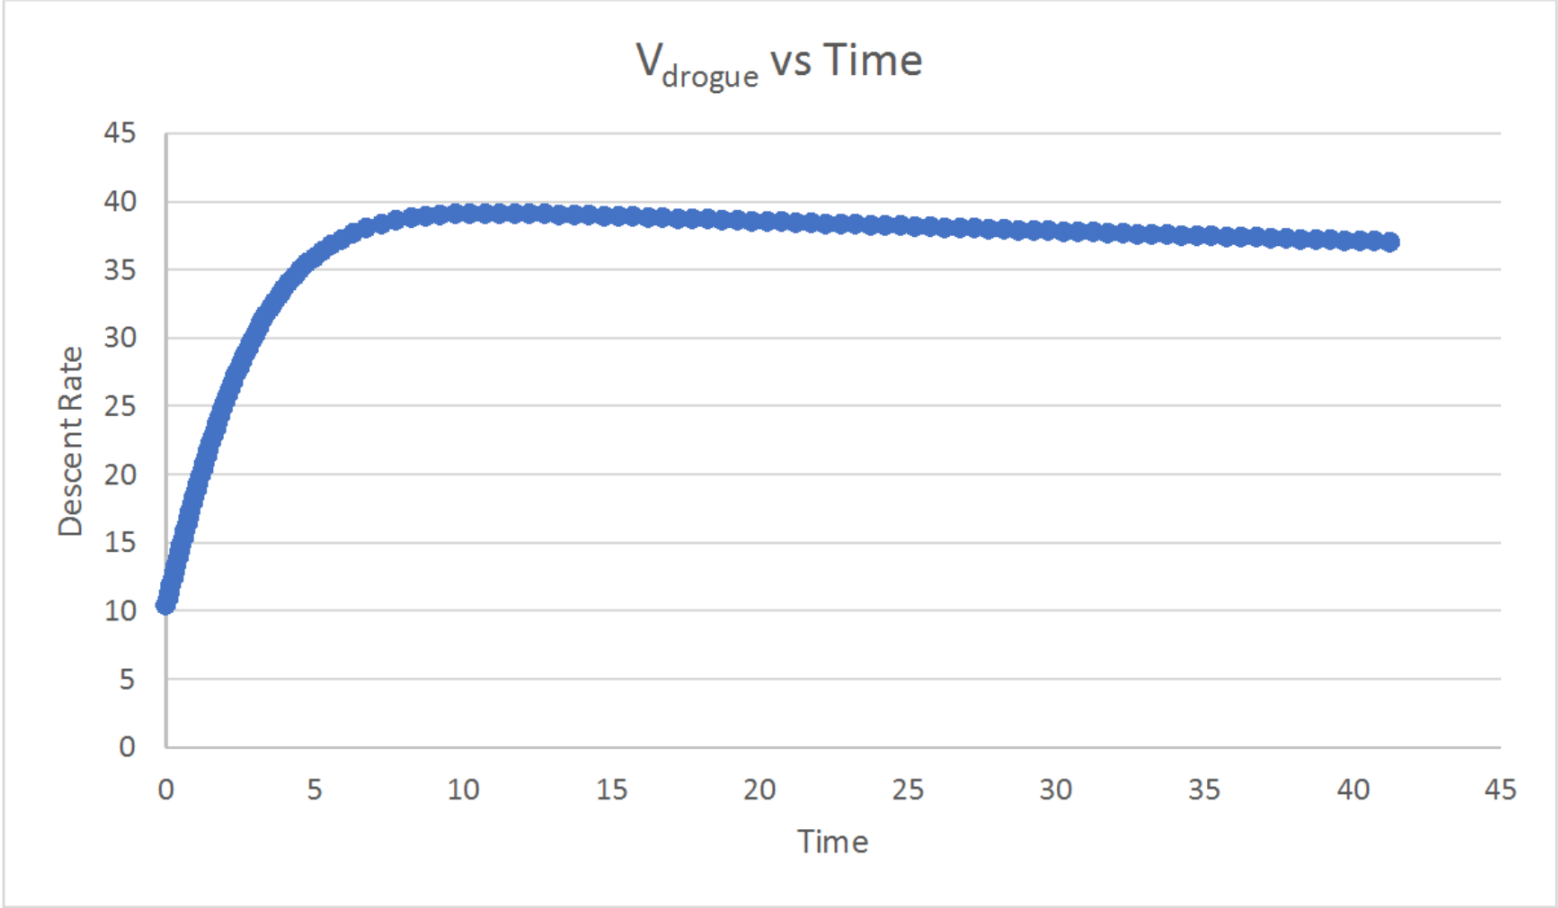

| Kinetic Energy *FRR*        |                     |                   |                    |
|-----------------------------|---------------------|-------------------|--------------------|
| Drogue Deployment           |                     |                   |                    |
|                             | Section 1 (Forward) | Section 2 (Aft)   |                    |
| Mass (g)                    | 4451 g              | 13129 g           |                    |
| Mass (lbm)                  | 9.813 lb            | 28.944 lb         |                    |
| Velocity (m/s)              | 38.082 m/s          | 38.082 m/s        |                    |
| Velocity (ft/s)             | 124.941 ft/s        | 124.941 ft/s      |                    |
| Kinetic Energy (J)          | 3227.506 J          | 9520.092 J        |                    |
| Kinetic Energy (ft·lb)      | 2380.462 ft·lb      | 7021.660 ft·lb    |                    |
| Main Deployment & Touchdown |                     |                   |                    |
|                             | Section 1 (Forward) | Section 2 (E-Bay) | Section 3 (Middle) |
| Mass (g)                    | 4451 g              | 3752 g            | 8100 g             |
| Mass (lbm)                  | 9.813 lb            | 8.272 lb          | 17.857 lb          |
| Velocity (m/s)              | 4.532 m/s           | 4.532 m/s         | 4.532 m/s          |
| Velocity (ft/s)             | 14.869 ft/s         | 14.869 ft/s       | 14.869 ft/s        |
| Kinetic Energy (J)          | 45.710 J            | 38.531 J          | 83.183 J           |
| Kinetic Energy (ft·lb)      | 33.714 ft·lb        | 28.419 ft·lb      | 61.353 ft·lb       |

# Drift Calculations

| Nominal Drift (2 ft drogue and 16 ft main) |        |              |              |              |              |
|--|--------|--------------|--------------|--------------|--------------|
| Wind Speeds                                |        |              |              |              |              |
| Wind Speed (mph)                           | 0 mph  | 5 mph        | 10 mph       | 15 mph       | 20 mph       |
| Wind Speed (ft/s)                          | 0 ft/s | 7.33333 ft/s | 14.6667 ft/s | 22 ft/s      | 29.3333 ft/s |
| Wind Speed (m/s)                           | 0 ft/s | 2.2352 m/s   | 4.4704 m/s   | 6.7056 m/s   | 8.9408 m/s   |
| Drogue Drift                               |        |              |              |              |              |
| Drift (ft)                                 | 0 ft   | 347.8360 ft  | 695.6719 ft  | 1043.5079 ft | 1391.3438 ft |
| Drift (m)                                  | 0 m    | 106.0204 m   | 212.0408 m   | 318.0612 m   | 424.0816 m   |
| Main Drift                                 |        |              |              |              |              |
| Drift (ft)                                 | 0 ft   | 207.8137 ft  | 415.6274 ft  | 623.4411 ft  | 831.2548 ft  |
| Drift (m)                                  | 0 m    | 63.3416 m    | 126.6832 m   | 190.0248 m   | 253.3665 m   |
| Total Drift (ft)                           | 0 ft   | 555.6496 ft  | 1111.2992 ft | 1666.9488 ft | 2222.5988 ft |
| Total Drift (m)                            | 0 m    | 169.3620 m   | 338.7240 m   | 508.086 m    | 677.4481 m   |

There was a 15% margin of error between simulated drift data and test drift data

# Total Descent Rate (main and drogue combined)

Payload

# Payload Summary

- Rover Weight: 1lb, 0.2oz
- Payload Assembly Weight: 3.5lbs
- Rover Length: 5.87in
- Rover Width: 4.3in
- Rover Height: 2.5in
- Wheel Diameter: 2.25in
- Bearing Housing ID: 4.92 in
- Bearing Housing OD: 5.79 in

# Rover Design

- Rover Chassis
- Rover Housing
- Bayonet Fitting
- In Wheel drive train
- Ultrasonic Steering
- Hinged Solar Deployment

# Payload Integration

- Mounted within a coupler tube
- Self-Orienting Housing
- Supporting wheel rail system
- Payload section of air frame composite upgrade

# Rover Electronics

## Travel Electronics

Microcontroller: Arduino Micro

- Small and light microcontroller that will carry out tasks and experiments

Ultrasonic Sensor:

- Used for obstacle avoidance

# Changes Since CDR

- Motor mount
- Transmitter/receiver
- Bayonet locking pin
- Back servo mount

# Payload Testing

- Motor power
- Gear meshing
- Rover egress
- Bearing load test

# Requirements Verification

## **Vehicle & Recovery**

- Apogee of 5280 ft
- Altimeters
- Exit Rail Velocity of 52 fps
- Rocket has max of 4 sections
- Main and Drogue Chute
- Nose Cone Ejection
- Parachute Entanglement

## **Payload & Safety**

- Correct Rover Deployment
- Remote Activation of Rover
- Rover must travel 5 ft
- Rover Will Deploy Solar Panels
- Safe Launch Set Up
- Emergency Safety Equipment
- Behavior and Conduct

# Safety Improvements

- Failure Mode Assessment Chart
- Hazards Recognition
- Environmental Concerns
- MSDS Data Sheets

| Item | Identification | Description  | Failure Modes  | Cause of Failure  | Effect On The   | Safeguard and   | Risk, 1-10 |
|------|----------------|--|--|---|---|---|------------|
| 5    | Eyebolt        | Creates connection between the bulkhead and shock cord | <ul style="list-style-type: none"> <li>• Eye bolts threaded end could get severed from bulkhead and lose the parachute or vehicle section upon deployment</li> </ul> | <ul style="list-style-type: none"> <li>• Vibrations during flight</li> <li>• Loose Fitting with bulkhead</li> </ul> | <ul style="list-style-type: none"> <li>• Failure to recover undamaged vehicle sections</li> </ul> | <ul style="list-style-type: none"> <li>• Inspect for yielding and proper welds</li> </ul> | 8          |

|   |           |   |  |  |  |   |   |
|---|-----------|---|--|--|--|---|---|
| 7 | Nose Cone | Creates efficient drag coefficient and secures Payload experiment equipment | <ul style="list-style-type: none"> <li>• Failure to deploy and separate</li> <li>• Nose Cone Damage</li> </ul> | <ul style="list-style-type: none"> <li>• Complication with the shear pins installed</li> <li>• Adjacent section premature deployment would cause unpredicted damage</li> </ul> | <ul style="list-style-type: none"> <li>• Failure to detach will prevent successful deployment of the rover</li> <li>• Damage to nosecone would affect the nosecone performance or payload continuity.</li> </ul> | <ul style="list-style-type: none"> <li>• In the event the nosecone is separated from the vehicle recovery system, a backup parachute has been installed</li> <li>• Larger shear pins installed and will be</li> </ul> | 9 |
|---|-----------|---|--|--|--|---|---|

# Outreach

- Satisfied Outreach Requirement

Great Volunteer Opportunity!

Build a Better, Bigger, Funkier, Tower, Crispier, and Smoother Las of Light!

Wester Elementary is hosting a monthly family STEM night and we need your help! We need student volunteers to help facilitate the different activities. We expect our attendance to double this year! There will be over 12 exciting STEM stations.

Day: Thursday, October 26  
 Time: 4:15-7:00 PM  
 Actual Event Time: 5:00-6:30  
 Where: Wester Elementary School  
 Lubbock, TX 79414  
 Contact: Mrs. Angie Raicic (rye-chick)  
 (806) 786-7726  
 arajcic@lubbockisd.org

A Few STEM Stations

| Station                   | Topics Covered                                      | Career Connection                  |
|---------------------------|---|------------------------------------|
| 1. Bubbles & Bortle       | Density, Chemical Change                            | Chemical Engineer                  |
| 2. Mighty Machine         | Energy, Forces                                      | Mechanical Engineer                |
| 3. Build A Boat           | Density, Buoyancy                                   | Marine Engineers, Naval Architects |
| 4. Space Docking Activity | Newton's Laws, Net Force                            | Astronaut                          |
| 5. Straw Rockets          | Newton's Laws, Forces & Motion                      | Aerospace Engineering              |
| 6. STEM Mural             | Art   | -                                  |
| 7. Computer Animation     | Programming, Logic                                  | Computer Programmer                |
| 8. Heart Rate Math        | Percentage, graphing, ratios                        | Sports engineer                    |
| 9. Drag Device Challenge  | Gravity, air resistance, forces & motion            | Mechanical Engineer                |
| 10. Talent Tower          | Forces & Balance                                    | Civil Engineer                     |
| 11. Make A Bird Feeder    | Ecosystem, Energy                                   | Biologist, Environmental Engineer  |
| 12. Paper Football Game   | Averages, statistics, accuracy, ratios, percentages | Statistician                       |
| 13. Soap Glider           | Drag, Forces & Motion                               | Aerospace Engineering              |
| 14. Slime                 | Chemical and physical changes, polymers             | Material Scientist                 |

### What is Wester Family STEM Night?

During our Family STEM Night meetings, families will be given a "problem" to solve and work together to plan, build, and create contraptions. They will then test their designs and make improvements. This "hands-on" activity will be fun, exciting, and family friendly for all ages. Parents are encouraged to get involved!

Best of all, it is FREE and fun for all!
